A degree in electrical and computer engineering, or ECE, will prepare you for careers in creating innovative hardware and software components and systems.

Drawing on your advanced knowledge of mathematics and physics, you will be able to contribute to the next generation of smartphones, Internet-connected appliances, smart grids, autonomous cars, surgical robots, and more—putting the “smart” in virtually every device you use.

Electrical, electronics, and computer engineering are growing fields that offer rewarding work and rising pay: their median annual salaries range from $103,000 to $119,000, according to the U.S. Bureau of Labor Statistics.

There are two ways to complete your MS in Electrical and Computer Engineering at UIC:

**THESIS OPTION**

In conjunction with your coursework, the thesis option pairs you with a faculty mentor and gives you the opportunity to write an original research-based thesis on an ECE topic that interests you. Students have found that the specialization of a thesis makes them more marketable to employers. Thesis experience also is ideal for students who might want to continue on for doctoral study after the MS.

**COURSEWORK OPTION**

The coursework-only option allows you to complete all the credits toward your MS degree through our comprehensive selection of electrical and computer engineering courses.

**UIC’s Academic Strengths**

- Electromagnetics
- Robotics
- Hardware Security
- Signal Processing and Data Science
- Microrobotics
- Wireless Communications

**Featured Courses**

- **Electromagnetics**
- **Robotics**
- **Hardware Security**
- **Signal Processing and Data Science**
- **Microrobotics**
- **Wireless Communications**

**A Step Ahead**

Thanks to the strength of our curriculum and UIC’s global connections, many MS students are able to get internships that help them level up their career planning.

**Iswaryalashmi Narayanan**

**Internship:** The Chamberlain Group

**Location:** Oak Brook, IL

**Assignment:** Working with the global innovation group on a new product for the company’s line of modular door-openers, integrating features such as cameras, voice control, and smart locks.

**Enrichment:** Embedding a small microchip into a pet collar that can automatically allow a pet access to the outdoors through an electronically enabled door.

**Her perspective:** “R&D exposure is a huge eye-opener. I have a new passion to create things. Imagine you walk into a store five years from now and see a product that you helped develop.”

**Niranjani Venkatesan**

**Internship:** LitePoint

**Location:** Arlington Heights, IL

**Assignment:** Testing Bluetooth and Wi-Fi devices such as modems, phones, and smart home devices, adhering to IEEE standards and making sure the products were configurable with legacy standards such as 2G, 3G, and 4G.

**Enrichment:** Discovering the value of UIC Engineering’s on-campus career fair, which Venkatesan said was key to finding her internship and then a full-time job.

**Her perspective:** “It was a great experience. LitePoint was very flexible and wanted us to learn and explore as much as possible in that three-month period.”
After UIC, where to?

Companies that have hired graduates of the UIC MS in Electrical and Computer Engineering program include:

- Amazon
- Broadcom
- Caterpillar
- Cisco Systems
- Citigroup
- Delta Mobile Software
- Enphase Energy
- Freescale Semiconductor
- Fujitsu R&D
- GE Research
- General Dynamics
- Google
- Huawei
- Intel
- LHV Power Corp.
- LitePoint
- Mayo Clinic
- Microsoft
- MIT Lincoln Laboratory
- National Institutes of Health
- Motorola
- Northrop Grumman
- Nvidia
- Philips
- Qualcomm
- Samsung
- Sandia National Laboratory
- Shure
- Schlumberger
- Siemens
- Space Systems / LORAL
- Stanley / Black & Decker
- Teradyne
- Trident Microsystems
- Varian Medical Systems
- Videojet Technologies
- Western Digital
- WiTech Instruments
- Xerox

Patrick Martin

Physicist, Northrop Grumman

Most people expect a full-time job to come at the end of their master's program. For Patrick Martin, the offer came right in the middle.

Martin held an internship with Northrop Grumman while he was working on his degrees in both physics and ECE at UIC. When he completed the physics program, the global security and aviation company offered him a full-time role, which he accepted. He then continued to work on his master’s in ECE while conducting data analysis for Northrop Grumman.

Martin was drawn to UIC for its national reputation, institutional resources, and faculty, whom he called “fantastic.” He advises: “You should be challenged—that’s the way the real world works. As engineers, we progress when we take leaps, and that’s easier when you’re in school. It’s the perfect place to learn, make mistakes, and grow.”

Manas Nyati

RF Engineer, Shure

Manas Nyati has what he describes as his dream job. A self-trained piano player, he loves music, and now his career involves helping musicians to hear, record, and communicate better.

Nyati works in the wireless communication division at Shure, where he conducts research and development toward new headphones, microphones, antennas, and other communication technologies, trying to reduce or eliminate interference. That might mean eliminating feedback from other instruments or cellphones, or improving the threshold that the sound can travel without losing connectivity.

The key to landing this role? Nyati’s UIC master’s thesis. “The thesis let me get my hands on instruments in the lab, which are important to industry. After the thesis, I had an internship at Nokia, and then I was able to get the job with Shure.”

Admissions

Full details on how to apply—including requirements and deadlines—are at ece.uic.edu under the Graduate menu.

Interested in graduate study at UIC? Talk to us. Contact our ECE graduate team with questions or for an informal conversation.
